CLEANING & PACKAGING

Every H98- & H98-HP series needle valve is cleaned in accordance with Standard Cleaning and Packaging (procedure 8184). Oxygen Clean & Lubricant Free Cleaning and packaging, in accordance with Special Cleaning and Packaging (procedure 8185), is available as an option.

TESTING

The H98- & H98-HP Series Needle Valve designs have been tested for Proof and Burst. Every H98- & H98-HP Needle Valve is factory tested with Nitrogen at 1000 psi (69 bar). The maximum allowable leakage across the seat is 0.1 std cc/min.

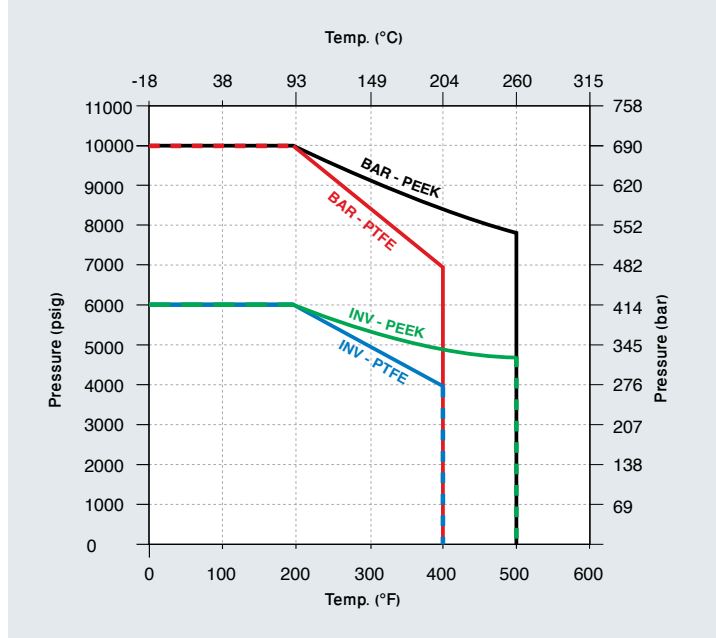

PACKING ADJUSTMENT

Due to the varied service applications of the valve, packing adjustment may occasionally be necessary. Valve packing is factory pre adjusted to 1000 psig service. Initial packing adjustment is recommended after installation and prior to start-up.

The maximum allowable pressure of welded connected valve is limited to the maximum allowed working pressure of the tube.

ALTERNATIVE STEMS

HAM-LET Needle Valves are available with a choice of stem-tip options to allow greater flexibility.

Regulating: Used where some degree of flow control is required.

V-Stem: A standard stem tip used for general-purpose liquids and gases.

Non-Rotating: Typically used in high-cycle applications to extend valve life. It is designed to prevent galling between the seat and the stem.
